

DURABLE INTERIOR DECORATIVE LAMINATES

ABSTRACT OF THE DISCLOSURE

5 An improved decorative laminate and method for making the improved decorative
laminate having a protective layer, an embossable layer, and a substrate layer; the
protective layer being a transparent tough resin material such as polyvinylidene fluoride
(PVDF) with a design printed thereon, the embossable layer being a pigmented
10 embossable resin, and the substrate layer being a fiber material. As a result of the
pigmentation of the embossable layer, preferably with the predominant color of the
design, scratches through the protective layer are not particularly noticeable since the
pigmented embossable layer will be exposed which matches the predominant color of the
design.
